

UNIXOL DISCHARGEN C

Stripping – Reducing Agent for the Snowtop and Brissa Processes on Wool-Skins

Typical Analysis

Appearance	: White Powder
pH (10% sol.)	: 5.0-6.0
Stability	: Non-stable against Alkali
Solubility	: In any proportion in cold water

Properties

Unixol Dischargen C is a stripping agent chiefly used after the dyeing process with **Unicion**, during the discharge operation to get white tips on the hairs and skins.

Unixol Dischargen C generates its reducing power in the presence of Formic Acid, at the minimum temperature of 100 °C wholly moist stream.

Application

Unixol Dischargen C is used in the discharging solution in quantity of 100 grams per 0.3 liter for colors.
